The Internship Programme Manager

Digi.Africa | MGA Group

Kenya

Re: Application for IT (Information Technology) Internship

Dear Hiring Manager,

Africa's digital future is being built right now — and I want to be part of the team building it. I am a final-year Bachelor of Business Information Technology (BBIT) student at Jomo Kenyatta University of Agriculture and Technology (JKUAT), graduating in June 2026, and I am writing to apply for the IT Internship at Digi.Africa. With two years of hands-on experience across IT operations, enterprise systems, backend development, and infrastructure gained through internships at NYALI Capital Limited and Bulkstream — I am confident I bring both the technical foundation and the drive that Digi.Africa looks for in its interns.

My most recent internship at NYALI Capital Limited involved maintaining client databases, managing digital document workflows on a specialised FinTech platform (Finobile), generating structured management reports, and conducting risk assessments using system-generated analytics. Prior to that, at Bulkstream, I supported enterprise-critical systems including an ERP platform, a Terminal Operation System, and a Time & Attendance solution, while also executing end-to-end network infrastructure projects — from cable planning and fibre splicing to IP phone configuration and automation equipment setup. These experiences have sharpened my ability to work across both software and hardware layers of an IT environment, manage competing priorities, and communicate technical information clearly to non-technical stakeholders.

Beyond operational IT, I have a strong backend development foundation. As my ALX Africa capstone project, I designed and delivered the Enterprise Leave Management System (ELMS) — a production-ready Django 5.2 application with multi-level approval workflows, JWT-secured REST APIs, role-based access control, automated email notifications, and a full audit-logging system. This project demonstrates that I can translate business requirements into reliable, well-documented software, which I believe would be directly valuable in a digitally-focused organisation like Digi.Africa.

What draws me specifically to Digi.Africa is the organisation's commitment to empowering businesses across the continent through practical, impactful digital solutions. I am eager to contribute to that work — whether supporting internal IT infrastructure, assisting with systems implementation, or helping clients adopt digital tools more effectively. I am a fast learner, comfortable working under supervision, and always quality-conscious in everything I deliver. I would be proud to grow my career in an environment that shares those values.

I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with the team's current needs. Please feel free to reach me at +254 792 177 472 or blaziousmwambuwa@gmail.com at your convenience. Thank you sincerely for your time and consideration — I look forward to hearing from you.

Yours sincerely,

Blazious Mwambuwa Mbogholi
